Art Unit: 1626

**Group XV**, Claims 68 and 69 drawn to methods of treatment with products of the formula as found in claim 51 wherein Y1 is Z-N(R1)R2; m is 0; Ar1 is pyrrolyl; V is CH=CH-; Ar2 is phenyl; Y2 is -Z-N(R1)R2; Z is (CH2)n; n is 1-4; R1 and R2 are hydrogen or optionally substituted C1-12-alkyl; p is 1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Again, this list is not exhaustive as it would be impossible under the time constraints due to the sheer volume of subject matter instantly claimed. Therefore, applicant may choose to elect a single invention (a product, or a method of use) by identifying another specific embodiment of similar scope to the exemplary groups which is not listed in the exemplary groups of the invention and examiner will endeavor to group the same. The applicant may also choose to elect a single disclosed species or a single disclosed species for a single method and the examiner will endeavor to create a group comprising the elected species of similar scope to the exemplary groups.

The claims herein lack unity of invention under PCT rule 13.1 and 13.2 since, under 37 CFR 1.475(a):

Where a group of inventions is claimed in an application, the requirement of unity of invention shall be fulfilled only when there is a technical relationship among those inventions involving one or more of the same or corresponding special technical features...those technical features that define a contribution which each of the claimed inventions, considered as a whole, makes over the prior art.

Groups I-XV lack unity of invention since under 37 CFR 1.475: the technical feature corresponding to the claims is: C(=O). This technical feature is not a special technical feature because it fails to define a contribution over the prior art as can be

Art Unit: 1626

seen, for example, by WO 93/17671, see IDS filed 6/16/2005. Therefore claims 1-69 are not so linked as to form a single general inventive concept and there is a lack of unity of invention because they lack a special technical feature as the technical feature present fails to define a contribution over the prior art. Additionally, the variables found on the technical feature vary extensively and when taken as a whole result in vastly different compounds. Accordingly, unity of invention is considered to be lacking and restriction of the invention in accordance with the rules of unity of invention is considered to be proper. Additionally, the vastness of the claimed subject matter, and the complications in understanding the claimed subject matter impose a serious burden on any examination of the claimed subject matter.

Therefore, since the claims do not relate to a single general inventive concept under PCT Rule 13.1 and lack the same or corresponding special technical feature, the claims lack unity of invention and should be limited to only a product or a method of use.

Furthermore, in regards to groups I-XV even if unity of invention under 37 CFR 1.475(a) is not considered lacking, which it is, under 37 CFR 1.475(b) a national stage application containing claims to different categories of invention will be considered to have unity of invention if the claims are drawn only to one of the following combinations:

- (1) A product and a process specially adapted for the manufacture of said product;  
or
- (2) A product and a process of use of said product; or
- (3) A product, a process specially adapted for the manufacture of the said product,  
and a use of the said product; or
- (4) A process and an apparatus or means specifically designed for carrying out the  
said process; or
- (5) A product, a process specially adapted for the manufacture of the said product,  
and an apparatus or means specifically designed for carrying out the said process.

Art Unit: 1626

And, according to 37 CFR 1.475(c)

if an application contains claims to more or less than one of the combinations of categories of invention set forth in paragraph (b), unity of invention might not be present.

Therefore, since the claims are drawn to more than a product and a process of use and according to 37 CFR 1.475 (e)

the determination whether a group of inventions is so linked as to form a single general inventive concept shall be made without regard to whether the inventions are claimed in separate claims or as alternatives within a single claim.

The claims, therefore, lack unity of invention.
